VB-AIRSUSPENSION APP

In an age where smartphones have become an integral part of daily life and an **APP** exists for almost everything, it is important for us as an innovative company to stay ahead of the times. We are delighted to report that **VB-AIRSUSPENSION** now has an **APP**.

The VB-Airsuspension app has a number of great functions:

you can find your nearest VB-Partner via the GPS on your smartphone, consult your air suspension user manual, customise the **APP** to match your personal style and use it in different languages.

But the most important feature of the **VB-APP** is that you can use it to operate your air suspension. This is done by connecting to the **VB-WAM** (Wireless Access Module). The **VB-WAM** sends a Bluetooth signal with which the module can connect to your smartphone. You can operate the air suspension via this connection from a distance of up to 30 metres.

Do you already have an air suspension system from VB-Airsuspension and would like to use the **VB-APP** with the **VB-WAM system**? No problem! The **VB-APP** is compatible with the VB-FullAir 2C and VBFullAir 4C systems from 2007 onwards.

The **VB-APP** is compatible with Android and iOS operating systems (iPhone 4S and newer). The **VB-APP** can be downloaded for free from Google Play and the Apple App Store. You can purchase the **VB-WAM** from your local VB-Partner.
