## THE COMPLETE CARAVAN LEVELSYSTEM

With the E&P Hydraulics LEVELSYSTEM, 2 main supports are mounted to the axle of the caravan so it can be raised and levelled side-to-side. These supports take the weight of the caravan. The standard crank supports are replaced with 4 hydraulically operated corner steadies, which help with the front-to-back levelling, giving 6 supports in total. This method of levelling reduces the force being transferred through the caravan floor when compared to manual corner steadies.

The levelling process is entirely automatic, but the hydraulic supports can also be controlled manually, in pairs; the choice is yours.

## REMOTE CONTROL

The wireless hand held remote control allows you to freely manoeuvre around the caravan, keeping a watchful eye on any possible obstructions or safety hazards. Or just sit in the car, out of the rain whilst the 2 minute levelling process completes.

 is proud to be a standard fit on all *Buccaneer* &  *Alaria* models.

The system can also be retro-fitted to any make/model of caravan in just one day.

## TECHNICAL DATA

- For caravans/special trailers with max total weight up to 3.5t
- Powered by the existing leisure battery
- Very low current draw
- 2 year warranty
- Emergency **pushbutton** retraction
- Under 28kg net weight for the whole system
- Kind to chassis frames

## SIMPLY STURDIER

- Solid position without sway or bounce
- Fully automatic levelling control
- A quiet night thanks to the perfectly stable and level position
